Preface xiii

1 Maxwell's Equations 1

- 1.1 Maxwell's Equations, 1
- 1.2 Lorentz Force, 2
- 1.3 Constitutive Relations, 3
- 1.4 Boundary Conditions, 7
- 1.5 Currents, Fluxes, and Conservation Laws, 9
- 1.6 Charge Conservation, 10
- 1.7 Energy Flux and Energy Conservation, 11
- 1.8 Harmonic Time Dependence, 13
- 1.9 Simple Models of Dielectrics, Conductors, and Plasmas, 16
- 1.10 Kramers-Kronig Dispersion Relations, 26
- 1.11 Group Velocity, Energy Velocity, 29
- 1.12 Problems, 31

2 Uniform Plane Waves 36

- 2.1 Uniform Plane Waves in Lossless Media, 36
- 2.2 Monochromatic Waves, 42
- 2.3 Energy Density and Flux, 45
- 2.4 Wave Impedance, 46
- 2.5 Polarization, 46
- 2.6 Uniform Plane Waves in Lossy Media, 52
- 2.7 Propagation in Weakly Lossy Dielectrics, 58
- 2.8 Propagation in Good Conductors, 59
- 2.9 Propagation in Oblique Directions, 61
- 2.10 Complex or Inhomogeneous Waves, 63
- 2.11 Doppler Effect, 66
- 2.12 Propagation in Negative-Index Media, 70
- 2.13 Problems, 73

3 Pulse Propagation in Dispersive Media 80

- 3.1 Propagation Filter, 80
- 3.2 Front Velocity and Causality, 82
- 3.3 Exact Impulse Response Examples, 85
- 3.4 Transient and Steady-State Behavior, 88

- 3.5 Pulse Propagation and Group Velocity, 92
- 3.6 Group Velocity Dispersion and Pulse Spreading, 95
- 3.7 Propagation and Chirping, 100
- 3.8 Dispersion Compensation, 101
- 3.9 Slow, Fast, and Negative Group Velocities, 103
- 3.10 Chirp Radar and Pulse Compression, 110
- 3.11 Further Reading, 120
- 3.12 Problems, 120

4 Propagation in Birefringent Media 129

- 4.1 Linear and Circular Birefringence, 129
- 4.2 Uniaxial and Biaxial Media, 130
- 4.3 Chiral Media, 132
- 4.4 Gyrotropic Media, 135
- 4.5 Linear and Circular Dichroism, 136
- 4.6 Oblique Propagation in Birefringent Media, 137
- 4.7 Problems, 144

5 Reflection and Transmission 150

- 5.1 Propagation Matrices, 150
- 5.2 Matching Matrices, 154
- 5.3 Reflected and Transmitted Power, 157
- 5.4 Single Dielectric Slab, 160
- 5.5 Reflectionless Slab, 163
- 5.6 Time-Domain Reflection Response, 171
- 5.7 Two Dielectric Slabs, 173
- 5.8 Reflection by a Moving Boundary, 175
- 5.9 Problems, 178

6 Multilayer Structures 183

- 6.1 Multiple Dielectric Slabs, 183
- 6.2 Antireflection Coatings, 185
- 6.3 Dielectric Mirrors, 190
- 6.4 Propagation Bandgaps, 201
- 6.5 Narrow-Band Transmission Filters, 201
- 6.6 Equal Travel-Time Multilayer Structures, 206
- 6.7 Applications of Layered Structures, 220
- 6.8 Chebyshev Design of Reflectionless Multilayers, 223
- 6.9 Problems, 231

7 Oblique Incidence 238

- 7.1 Oblique Incidence and Snell's Laws, 238
- 7.2 Transverse Impedance, 240
- 7.3 Propagation and Matching of Transverse Fields, 243
- 7.4 Fresnel Reflection Coefficients, 245
- 7.5 Maximum Angle and Critical Angle, 247
- 7.6 Brewster Angle, 256

- 7.7 Complex Waves, 258
- 7.8 Total Internal Reflection, 261
- 7.9 Oblique Incidence on a Lossy Medium, 262
- 7.10 Zenneck Surface Wave, 267
- 7.11 Surface Plasmons, 269
- 7.12 Oblique Reflection from a Moving Boundary, 272
- 7.13 Geometrical Optics, 276
- 7.14 Fermat's Principle, 279
- 7.15 Ray Tracing, 281
- 7.16 Snel's Law in Negative-Index Media, 292
- 7.17 Problems, 295

8 Multilayer Film Applications 300

- 8.1 Multilayer Dielectric Structures at Oblique Incidence, 300
- 8.2 Lossy Multilayer Structures, 302
- 8.3 Single Dielectric Slab, 304
- 8.4 Frustrated Total Internal Reflection, 306
- 8.5 Surface Plasmon Resonance, 310
- 8.6 Perfect Lens in Negative-Index Media, 319
- 8.7 Antireflection Coatings at Oblique Incidence, 327
- 8.8 Omnidirectional Dielectric Mirrors, 330
- 8.9 Polarizing Beam Splitters, 341
- 8.10 Reflection and Refraction in Birefringent Media, 343
- 8.11 Brewster and Critical Angles in Birefringent Media, 347
- 8.12 Multilayer Birefringent Structures, 350
- 8.13 Giant Birefringent Optics, 352
- 8.14 Problems, 357

9 Waveguides 359

- 9.1 Longitudinal-Transverse Decompositions, 360
- 9.2 Power Transfer and Attenuation, 365
- 9.3 TEM, TE, and TM modes, 367
- 9.4 Rectangular Waveguides, 370
- 9.5 Higher TE and TM modes, 372
- 9.6 Operating Bandwidth, 374
- 9.7 Power Transfer, Energy Density, and Group Velocity, 375
- 9.8 Power Attenuation, 377
- 9.9 Reflection Model of Waveguide Propagation, 380
- 9.10 Resonant Cavities, 382
- 9.11 Dielectric Slab Waveguides, 384
- 9.12 Problems, 392

10 Transmission Lines 394

- 10.1 General Properties of TEM Transmission Lines, 394
- 10.2 Parallel Plate Lines, 400
- 10.3 Microstrip Lines, 401
- 10.4 Coaxial Lines, 405
- 10.5 Two-Wire Lines, 410

- 10.6 Distributed Circuit Model of a Transmission Line, 412
- 10.7 Wave Impedance and Reflection Response, 414
- 10.8 Two-Port Equivalent Circuit, 416
- 10.9 Terminated Transmission Lines, 417
- 10.10 Power Transfer from Generator to Load, 420
- 10.11 Open- and Short-Circuited Transmission Lines, 422
- 10.12 Standing Wave Ratio, 425
- 10.13 Determining an Unknown Load Impedance, 427
- 10.14 Smith Chart, 431
- 10.15 Time-Domain Response of Transmission Lines, 435
- 10.16 Problems, 442

11 Coupled Lines 453

- 11.1 Coupled Transmission Lines, 453
- 11.2 Crosstalk Between Lines, 459
- 11.3 Weakly Coupled Lines with Arbitrary Terminations, 462
- 11.4 Coupled-Mode Theory, 464
- 11.5 Fiber Bragg Gratings, 466
- 11.6 Diffuse Reflection and Transmission, 469
- 11.7 Problems, 471

12 Impedance Matching 473

- 12.1 Conjugate and Reflectionless Matching, 473
- 12.2 Multisection Transmission Lines, 475
- 12.3 Quarter-Wavelength Chebyshev Transformers, 476
- 12.4 Two-Section Dual-Band Chebyshev Transformers, 482
- 12.5 Quarter-Wavelength Transformer With Series Section, 488
- 12.6 Quarter-Wavelength Transformer With Shunt Stub, 491
- 12.7 Two-Section Series Impedance Transformer, 493
- 12.8 Single Stub Matching, 498
- 12.9 Balanced Stubs, 502
- 12.10 Double and Triple Stub Matching, 504
- 12.11 L-Section Lumped Reactive Matching Networks, 506
- 12.12 Pi-Section Lumped Reactive Matching Networks, 509
- 12.13 Reversed Matching Networks, 516
- 12.14 Problems, 518

13 S-Parameters 522

- 13.1 Scattering Parameters, 522
- 13.2 Power Flow, 526
- 13.3 Parameter Conversions, 527
- 13.4 Input and Output Reflection Coefficients, 528
- 13.5 Stability Circles, 530
- 13.6 Power Gains, 536
- 13.7 Generalized S-Parameters and Power Waves, 542
- 13.8 Simultaneous Conjugate Matching, 546
- 13.9 Power Gain Circles, 551
- 13.10 Unilateral Gain Circles, 552

- 13.11 Operating and Available Power Gain Circles, 554
- 13.12 Noise Figure Circles, 560
- 13.13 Problems, 565

14 Radiation Fields 568

- 14.1 Currents and Charges as Sources of Fields, 568
- 14.2 Retarded Potentials, 570
- 14.3 Harmonic Time Dependence, 573
- 14.4 Fields of a Linear Wire Antenna, 575
- 14.5 Fields of Electric and Magnetic Dipoles, 577
- 14.6 Ewald-Oseen Extinction Theorem, 582
- 14.7 Radiation Fields, 587
- 14.8 Radial Coordinates, 590
- 14.9 Radiation Field Approximation, 592
- 14.10 Computing the Radiation Fields, 593
- 14.11 Problems, 595

15 Transmitting and Receiving Antennas 598

- 15.1 Energy Flux and Radiation Intensity, 598
- 15.2 Directivity, Gain, and Beamwidth, 599
- 15.3 Effective Area, 604
- 15.4 Antenna Equivalent Circuits, 608
- 15.5 Effective Length, 610
- 15.6 Communicating Antennas, 612
- 15.7 Antenna Noise Temperature, 614
- 15.8 System Noise Temperature, 618
- 15.9 Data Rate Limits, 624
- 15.10 Satellite Links, 626
- 15.11 Radar Equation, 629
- 15.12 Problems, 631

16 Linear and Loop Antennas 634

- 16.1 Linear Antennas, 634
- 16.2 Hertzian Dipole, 636
- 16.3 Standing-Wave Antennas, 638
- 16.4 Half-Wave Dipole, 642
- 16.5 Monopole Antennas, 643
- 16.6 Traveling-Wave Antennas, 645
- 16.7 Vee and Rhombic Antennas, 647
- 16.8 Loop Antennas, 650
- 16.9 Circular Loops, 652
- 16.10 Square Loops, 654
- 16.11 Dipole and Quadrupole Radiation, 655
- 16.12 Problems, 657

17 Radiation from Apertures 658

- 17.1 Field Equivalence Principle, 658
- 17.2 Magnetic Currents and Duality, 660
- 17.3 Radiation Fields from Magnetic Currents, 662
- 17.4 Radiation Fields from Apertures, 663
- 17.5 Huygens Source, 666
- 17.6 Directivity and Effective Area of Apertures, 668
- 17.7 Uniform Apertures, 670
- 17.8 Rectangular Apertures, 670
- 17.9 Circular Apertures, 672
- 17.10 Vector Diffraction Theory, 675
- 17.11 Extinction Theorem, 679
- 17.12 Vector Diffraction for Apertures, 681
- 17.13 Fresnel Diffraction, 682
- 17.14 Knife-Edge Diffraction, 686
- 17.15 Geometrical Theory of Diffraction, 694
- 17.16 Rayleigh-Sommerfeld Diffraction Theory, 700
- 17.17 Plane-Wave Spectrum Representation, 703
- 17.18 Fresnel Diffraction and Fourier Optics, 708
- 17.19 Problems, 719

18 Aperture Antennas 723

- 18.1 Open-Ended Waveguides, 723
- 18.2 Horn Antennas, 727
- 18.3 Horn Radiation Fields, 729
- 18.4 Horn Directivity, 734
- 18.5 Horn Design, 737
- 18.6 Microstrip Antennas, 740
- 18.7 Parabolic Reflector Antennas, 746
- 18.8 Gain and Beamwidth of Reflector Antennas, 748
- 18.9 Aperture-Field and Current-Distribution Methods, 751
- 18.10 Radiation Patterns of Reflector Antennas, 754
- 18.11 Dual-Reflector Antennas, 763
- 18.12 Lens Antennas, 766

19 Antenna Arrays 768

- 19.1 Antenna Arrays, 768
- 19.2 Translational Phase Shift, 768
- 19.3 Array Pattern Multiplication, 770
- 19.4 One-Dimensional Arrays, 780
- 19.5 Visible Region, 782
- 19.6 Grating Lobes, 784
- 19.7 Uniform Arrays, 786
- 19.8 Array Directivity, 790
- 19.9 Array Steering, 791
- 19.10 Array Beamwidth, 794
- 19.11 Problems, 796

20 Array Design Methods 799

- 20.1 Array Design Methods, 799
- 20.2 Schelkunoff's Zero Placement Method, 802
- 20.3 Fourier Series Method with Windowing, 804
- 20.4 Sector Beam Array Design, 805
- 20.5 Woodward-Lawson Frequency-Sampling Design, 809
- 20.6 Discretization of Continuous Line Sources, 814
- 20.7 Narrow-Beam Low-Sidelobe Designs, 818
- 20.8 Binomial Arrays, 822
- 20.9 Dolph-Chebyshev Arrays, 823
- 20.10 Taylor One-Parameter Source, 836
- 20.11 Prolate Array, 840
- 20.12 Taylor Line Source, 842
- 20.13 Villeneuve Arrays, 846
- 20.14 Multibeam Arrays, 847
- 20.15 Problems, 850

21 Currents on Linear Antennas 852

- 21.1 Hallén and Pocklington Integral Equations, 852
- 21.2 Delta-Gap, Frill Generator, and Plane-Wave Sources, 855
- 21.3 Solving Hallén's Equation, 856
- 21.4 Sinusoidal Current Approximation, 858
- 21.5 Reflecting and Center-Loaded Receiving Antennas, 859
- 21.6 King's Three-Term Approximation, 862
- 21.7 Evaluation of the Exact Kernel, 869
- 21.8 Method of Moments, 874
- 21.9 Delta-Function Basis, 877
- 21.10 Pulse Basis, 881
- 21.11 Triangular Basis, 886
- 21.12 NEC Sinusoidal Basis, 888
- 21.13 Hallén's Equation for Arbitrary Incident Field, 891
- 21.14 Solving Pocklington's Equation, 896
- 21.15 Problems, 900

22 Coupled Antennas 902

- 22.1 Near Fields of Linear Antennas, 902
- 22.2 Self and Mutual Impedance, 905
- 22.3 Coupled Two-Element Arrays, 911
- 22.4 Arrays of Parallel Dipoles, 914
- 22.5 Yagi-Uda Antennas, 923
- 22.6 Hallén Equations for Coupled Antennas, 929
- 22.7 Problems, 936

23 Appendices 938

- A Physical Constants, 938
- B Electromagnetic Frequency Bands, 939
- C Vector Identities and Integral Theorems, 941

- D Green's Functions, 944
- E Coordinate Systems, 947
- F Fresnel, Exponential, Sine, and Cosine Integrals, 949
- G Gauss-Legendre Quadrature, 955
- H Lorentz Transformations, 961
- I MATLAB Functions, 969
